DETAILED ACTION

1. The response of 1/3/2008 was received and considered.
2. Claims 1-10 are allowed.

Allowable Subject Matter

3. Claims 1-10 are allowed.
4. The following is an examiner's statement of reasons for allowance:
 - a. Regarding claims 1 & 6, **Wasilewski** discloses carrying out, at a subscriber installation specific access interface (SABER, Fig. 1, & ¶123 – SP provisions CAM with CA information making it subscriber installation specific & Fig. 12), police control operations (conditional access where control words are encrypted, ¶47) on streams of packets transmitted to the concentrating router (NAN, Fig. 1), within the framework of a contract between the subscriber (service provider) and a manager (SABER) of a shared network (¶36, CAM receives access requirements (contract) from SP), the subscriber (service provider SP) being a customer to a service provider in said shared network (SP is a customer of the SABER system because SABER is providing conditional access services for the provider), and after having carried out the control operations (encryption operation) concerning a packet to be transmitted, transmitting the packet from said access interface (SABER) to the concentrating router (NAN, Fig. 1), each packet being transmitted with a signature (¶60 – signature added to MSK packet) based on a secret (private key/public key pair, ¶60), authenticating that the packet has been subjected to the control operations (¶63). **Atkinson** teaches an analogous art where packets that have

been assigned digital signatures are authenticated at intermediate routers/gateways (col. 10, lines 20-33), permitting policy-based routing (col. 11, lines 17-19). Further, U.S. Patent 6,240,091 to **Ginzboorg** et al. discloses an access interface (PC) at the subscriber premises (Figs. 3a-3d), sending packets to a concentrating router (Fig. 3a, R1) within the framework of a contract (contract requiring reporting of charge) and the access interface (PC) adding a signature to packets the PC creates to verify integrity (cols. 5-18). U.S. Patent 5,835,726 to **Shwed** et al. discloses rule-based packet examination (control operations) and the addition of a signature (col. 13, lines 5-25). U.S. Patent 1,117,361 to **Hild** et al. is cited for teaching transmitting packets from a transcoder to a terminal (downstream) with signatures appended. U.S. Patent 6,289,451 to **Dice** teaches appending a digital signature to all packets from a source to a destination. U.S. Patent 6,370,629 to **Hastings** et al. is cited for teaching a cryptographic circuit board performing policing operations (adding an initialization vector to packets), adding a signature to the packet and transmitting the packet to a decoder. U.S. Patent 6,658,565 to **Gupta** et al. is cited for teaching appending a digital signature to all packets.

However, the prior art of record fails to teach or disclose, either alone or in combination, carrying out, at a subscriber installation specific access interface, police control operations on streams of packets transmitted to the concentrating router, within the framework of a contract between the subscriber and a manager of a shared network, the subscriber being a customer to a service provider in the shared network and the access interface being located in the subscriber's premises and after having carried out the control operations concerning a packet to be transmitted, transmitting the packet

from the access interface to the concentrating router, each packet being transmitted with a signature based on a shared secret with the concentrating router, authenticating that the packet has been subjected to the control operations, in combination with the other elements of the claims.

Claims 2-5 and 7-10 are allowed based on their dependence upon claims 1 and 6.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
